

MOBILE CINEMA

First off, THANKS FOR BUYING THIS ASSET!

You are supporting a small team of game developers!

We salute you!

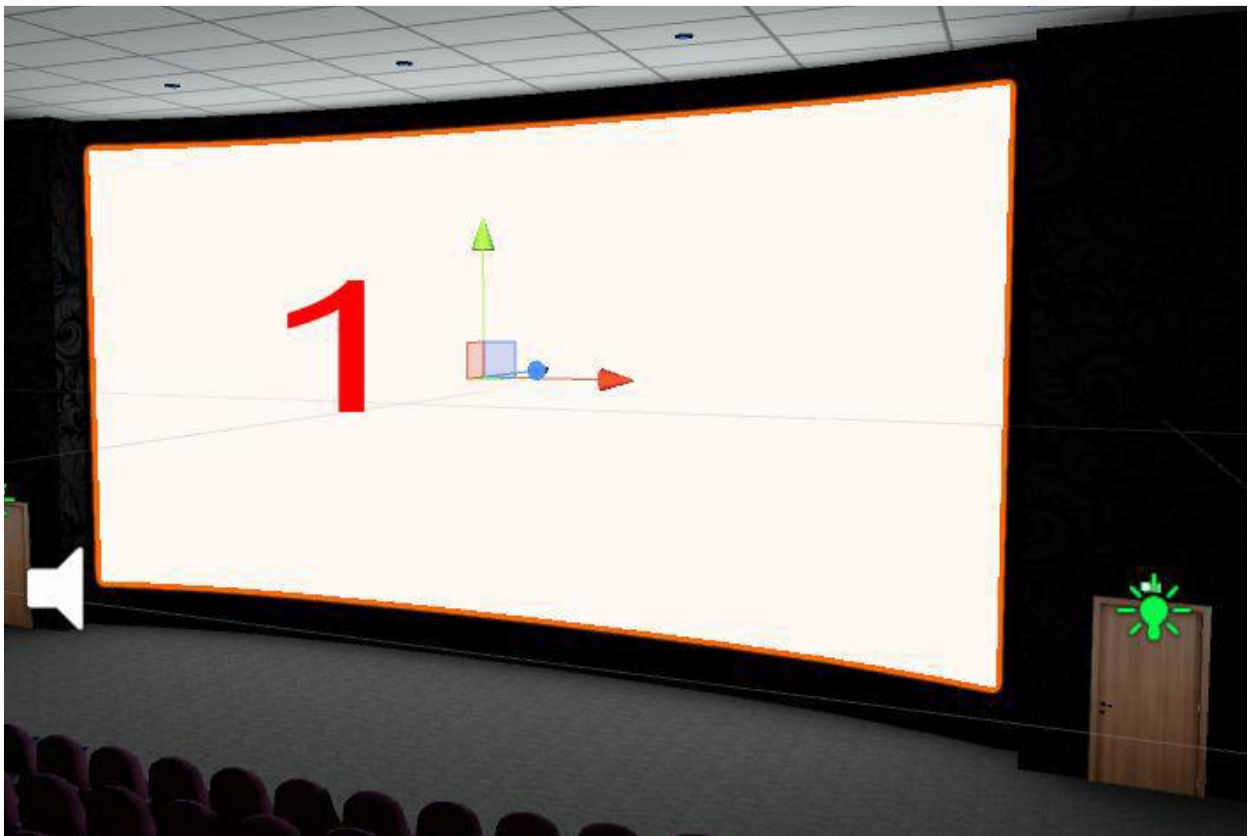

Licensing

The resources can be used in your commercial projects such as: games, presentations and video demonstrations. But the sale of Mobile Cinema 5.0 is strictly prohibited! No matter in whole or in separate parts such as: 3D models of theatre, textures, scripts. Also prohibited the publication on the Internet for free download! It will be treated as piracy. And violations will be carefully considered.

Tutorial

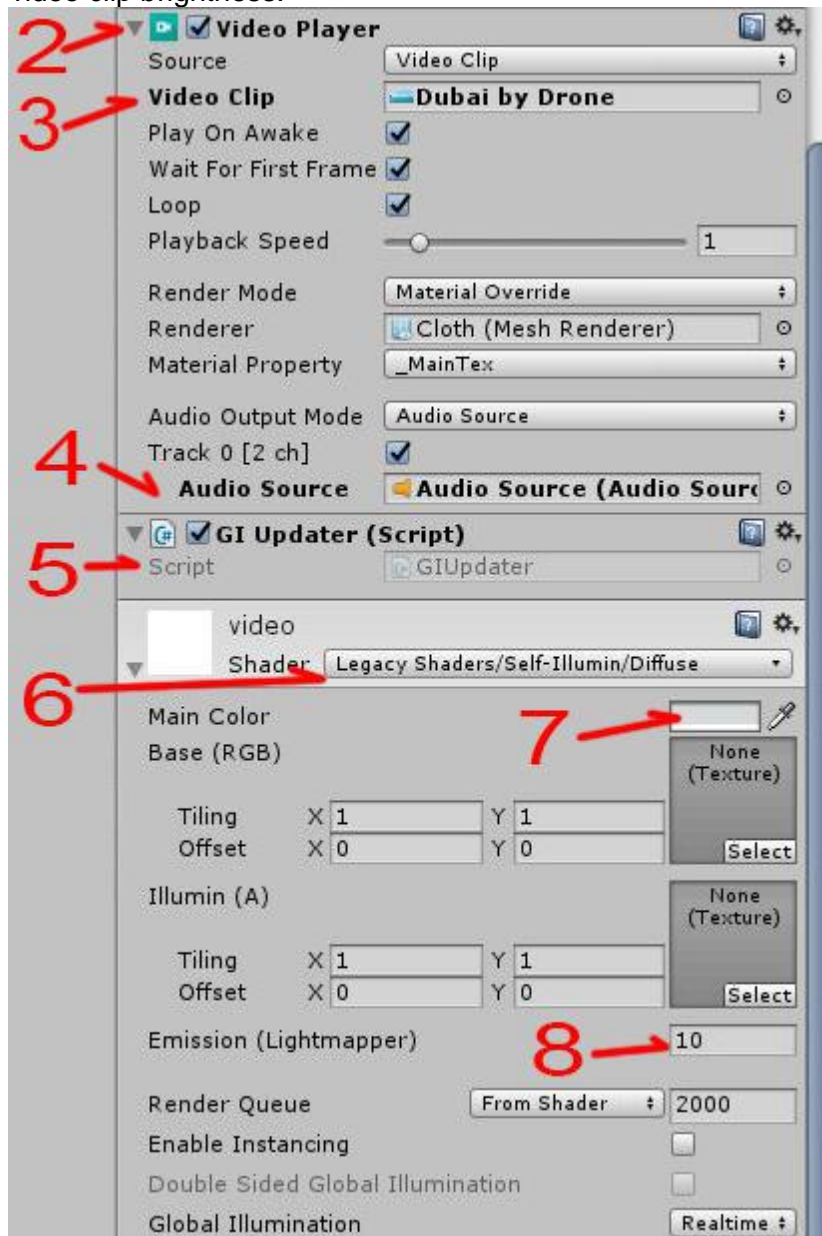

For create a realistic cinema you need to take a few steps:

1. Select the screen on which the video clip will be played.

2. Add the video player script.

3. Add your video clip.
4. Add sound for your video clip.
5. Add the GI updater script (it is necessary for global illumination in real time).
6. Here I used the Legacy Shade / Self-Illumin / diffuse material (for the screen to be bright and the video to illuminate the room).
7. This parameter adjusts the brightness of the video clip.
8. Also for video clip brightness.

GOOD LUCK!
